Call for emergency humanitarian assistance in the measles-infested areas in CHT

Statement of 'Bangladesh Indigenous Peoples Forum' and 'Kapaeeng Foundation' on the outbreak of measles in the remote areas of Rangamati and Bandarban Hill Districts.

Bangladesh Indigenous Forum' and Kapaeeng Foundation have raised concerns over the Corona (Covid 19) situation and the recent outbreak of measles in Sajek union of Baghaichari upazila of Rangamati district and Lama upazila of Bandarban district. Government and private initiatives in combating Corona and the way it has received everyone's attention will undoubtedly produce good results. But it is also need to take into consideration whether the outbreak of measles in the hills will be hidden due to Corona Pandemic from the eyes of the authorities. For this reason, we urge the public and non-governmental organizations and concerned authorities to give it priority and provide continuous medical and healthcare services.

We learned that, this natural epidemic occurred about a month ago, and that at least 300 children were infected and 8 were dead. In the meantime, its residents are living in great anxiety and public life is in turmoil. This undoubtedly reflects the inadequate state's facilities and health care conditions. Relevantly, measles has been reported in Ruma upazila of Bandarban district as well. It is to be mention that, about 250 persons out of 6 villages in Sajek union has been affected by measles while most of them are children. Currently, Arunpara area under Tuichui Mouza are in the very worst conditions. 6 children died in a span of 20 days. The other affected villages are-Longthian Para, Kamlapur Chakma Para, Newthang/Notunpara, Hayicchapara and so on. It is known that at least 100 children and 7-8 years old are in worst conditions. Villagers alleged that no vaccination was provided to the children in their villages. None of the government's health services and health workers also reached there. It is to be noted that, lack of public-private health care and under socio-economic conditions has left these villagers, especially the children malnourished and diseased. On the other hand, the outbreak of measles has occurred around the same time in the remote areas of Lama Union in Lama upazila of Bandarban hill district. A 6-month-old Mro child has died and 42 have been infected, including at least 33 children in Mro inhabitant's area of Lallyapara area. It is learned that, on 16 March 2020, 31 children's and two adult patients were admitted to the Upazila Health Complex. At the very first health workers tried to keep it as an unknown disease. Needless to say, many remote areas of Bandarban upazila, including Lallyapara, did not have access to public healthcare.

We also find out that, medical services are being provided in the troubled areas of Sajek. Measles vaccines and vitamin A capsules are being fed. But some patients are in so critical that, they have to be brought to Chittagong by helicopter with the help of law enforcement agencies. On the other hand, we did not find out whether the health workers team went to the troubled area of Lama upazila yet. We think that, the outbreak would not have occurred if the government had reached out to the public with immunization programs and health

care services. If the responsible organizations or individuals performed their duties properly, these lives could have been saved. In the Twenty-first century, death due to measles cannot be imagined.

In this situation, we urge the public and private organizations to come forward to save the affected patients. Individuals or organizations also need to raise their hands to ensure their health care and nutrition. The humanitarian crisis should not be lost in the corona crisis. Along with Corona, the outbreak of the measles in Chittagong Hill Tracts receive the attention from the administration and the affected patients recover and return to their normal life.

We Urge:

1. To establish a medical board to ensure continuous, uninterrupted and adequate medical care in the affected areas.
2. To ensure emergency humanitarian assistance in the measles-infested areas.
3. To provide free medical care to the affected patients.
4. To conduct proper investigation of the incident and provide adequate compensation to the affected families.
